Niche Area and Relevance of RIG

- To carry out **fundamental and applied research** related to the **membrane-based separations** for **various applications**
- To discover and fabricate new membrane materials and designs, and further develop fundamental understanding of the **relationship** between the **membrane structure** and its **characteristic separation** properties.
- To carry out **design study** by **modifying the membrane structure** and **morphology** (blending, thin film deposition and in-situ functionalization) with an aim to search for **optimal trade-offs**, to solve the requirements of high flux and selectivity.
